

Weekly Reading and Homework

Week of April 6th, 2020

1 Reading

For this week, please read the following sections of the course textbook:

1. Section 3.1
2. Section 3.2
3. Section 2.8
4. Section 2.9
5. Section 4.1

As always, it is important for you to read with pencil and paper in hand, follow the details closely, and work out any examples done in the sections. I hope that you are able to watch the video lectures in conjunction with reading the sections. Please remember that not all material will be covered via video lecture, so it is important you read the sections. Once you feel you have a good understanding of the sections, please attempt that section's homework.

2 Homework

Homework 6 and Homework 7 have now both been assigned and are available on MyLab Math. The due dates are Wednesday and Friday, respectively. Please make sure you are working on these homework assignments (instructions to access the online homework was given in my email on April 3rd).

3 Project 1

The final draft for Project 1 is due on April 17, by midnight in your respective timezone. I originally said they were due earlier; however, it is taken me longer than expected to give you feedback (which you should expect this week) on your rough drafts and, for this reason, I have decided to move the original due date. The assignment for Project 2 is forthcoming.
